

# Design V. Chaos

## God's Electrical Basis for Order in the Universe

Electricity and Physics for the 2003-2004 Homeschool Year

God has created two forms of energy:

1. Raw Energy in the form of waves, like light, ultraviolet, infrared, electrical, radio, and many other types of waves.
2. Refined Energy. God gave the raw energy a positive and negative charge so that it could bind together into spinning rings of energy to form matter. This is called the Spinning Ring Model of the Atom. Developed by Dr. Lucas and Dave Bergman.

This year's lessons will be based upon Russ's best selling book, Design v. Chaos, A New Model of the Atom Based on Classical Science and a Biblical World View. Russ's book is written in 6<sup>th</sup> grade language so that all levels can understand this amazing atom that God has created for the basis of the physical universe. If you understand magnetism you can understand the new model of the atom.

Hands on activities with circuit boards, ancient electricity, crystal skull, static electricity, crystal radios, Christian inventors, exploring magnetism, and much more.

In November we will offer Science camps where you will receive 8 science lessons, activities, and games in 2 days. Usually 9AM to 2PM\*.

The cost is \$5 per hour per student with a \$20 materials fee per family which includes a CD Syllabus with over 500 pages of notes, colored pictures, vocabulary, quizzes, and activities. The materials will be coordinated with the A Beka Book, "Matter in Motion." Parents can use these classes as their complete science curriculum.

Teens are encouraged to come. Remember parents come free and many tell us they enjoy the classes as much as their children. Also, parents can review and teach the materials from the CD Syllabus better if they have been in the classes.

Tell your homeschool group leader if you are interested in these classes. We will work through them. If you have no co-op then contact us for a school near you.
