

The Soft Side of a Mean Dinosaur

Tuesday September 20, 2022, 7:30 PM, **Univ. of Northwestern, Totino Fine Arts Center, Room F2106**

To date, Dr. Mark Armitage and the Dinosaur Soft Tissue Research Institute (dstri.org) has published 7 papers in peer-reviewed publications on the characteristics of dinosaur soft tissue (dST). Most people are unaware of the presence and the very high preservation of dST still present in dinosaur bones buried just below the surface throughout the Hell Creek Formation.

Folks are shocked when they learn that many dinosaur bones are still bone and not rock, and that the soft tissue within them is the norm and not the exception. In this presentation, Dr. Armitage will review their published findings (Cambridge University Press) from the Journal, Microscopy Today.

He will review his world-first findings of soft sheets of fibrillar bone, veins, vessels, cells and even nerves (full of lipids) in dinosaurs including Nanotyrannus, a fierce raptor-like dinosaur that some refer to as a juvenile T. rex. He will show that most of the bones they collect are full of blood clots revealing disseminated intravascular coagulation and hypercoagulopathy (yes, Google these).

Many bones that they have collected, and have harvested soft tissue from, will be on display and can be handled by attendees. Free copies of our "Old Stretchy" books will be given away to all who desire them.

Updates at www.tccsa.tc All meetings free and open to the public.

Have you considered...

...that dinosaurs bones are NOT 65-million-years-old?

New discoveries have found soft tissue within dinosaur bones. The level of preservation is even more fantastic than originally thought! If the dino bones were millions of years old, we should see decay and we do not. Nerve bundles can be seen with a microscope. They are so well preserved that the nerve bundles are seen with the myelin sheath and its cross-hatching wrapping around the nerve. Also found are valves in the veins with their tiny rings and flaps. When the bone is shaved to 1/2 of a human hair, blood clots are found. The blood clots are restricted to the blood canals. This means that iron from the blood did not leak into the bone. So what, you may say? This means that iron did not preserve the dinosaur soft tissue as evolutionists sometimes claim. Blood clots are quite common. The blood clots in dinosaurs are the same as those found in humans that have drowned, **so the dinosaur drowned... in the Flood!**

Dinosaurs declare that Noah's Flood is true, and they died out recently. The Bible is correct! Dinosaurs are really OUR "missionaries".

For additional information on activities scheduled this month related to our speaker see other side.

Coming Up (Lord Willing)

Oct. 18—Dr. Clyde Billington—The Screaming Mummy

Nov. 15— Helmut Welke—First 4 days of Creation

Jan. 17—Pending

TCCSA's STATEMENT OF BELIEF

We believe in God: The Father, Son and Holy Spirit. We believe that the Bible is the inspired Word of God, and that all of its assertions are historically and scientifically true in the original autographs; this means that the account of origins in Genesis is a factual presentation of actual historical truths. We believe that the origin of matter and all basic types of living things, including man, came about through direct creative acts of God during the six-day creation week described in Genesis. Whatever biological changes have occurred since the creation week have accomplished only changes within the created kinds. We believe that the great flood described in Genesis, commonly referred to as the Noachian Flood, was an historic event, world-wide in extent and effect. We accept the account of the special creation of Adam and Eve as the first man and woman. Their subsequent fall into sin, by disobedience of God's direct command, is the basis for our belief in the necessity of a Savior for all mankind. Therefore, we believe that Jesus Christ is our Lord and only Savior and that personal faith in Him is necessary for salvation.

Have you Considered—Continued

If you can't make the **TCCSA** meeting, Dr. Mark Armitage will be giving the same presentation on Sunday, September 18 at 5:30 at Inspired Word Church, 12825 Tucker Rd, Rogers, MN 55374

Labs are being held on Wednesday and Saturday for present and past homeschool students 10-24 years of age to see for themselves dinosaur bones and the soft tissue inside them.

Pastors FREE luncheon on Thursday, September 22, 11:30-1. **How do I answer my congregations'** questions about dinosaurs? Also, any questions you may have—now is the time to ask. RSVP to email below.

Any questions contact: julievonvett@gmail.com

This month is special with Dr. Armitage coming, if you know a home school family with kids who love science, please let them know about this. A student attending the training lab could make some major changes in their education and career goals.

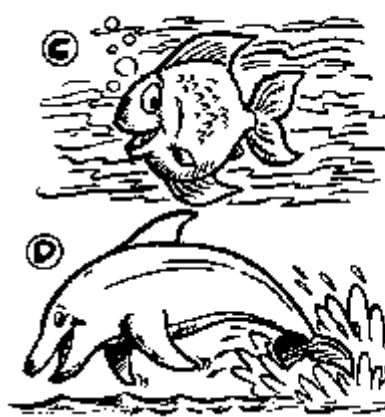

Even if they don't make this a career, they will learn things that disprove evolution that will stick with them. In the future when what they read, hear or see things trying to convince them that evolution is fact, they will know the truth. Real science shows the Bible can be trusted.

CREATIONWISE

CREATION QUIZ #1

?

WHICH OF THE FOLLOWING CREATURES HAVE BEEN ON THE EARTH THE LONGEST?

ANSWERS:
A, C, AND D HAVE BEEN AROUND THE LONGEST! ALL CREATED ON DAY 5. (GEN. 1:20-23)

ALL LAND ANIMALS (INCLUDING DINOS) WERE CREATED ON DAY 6!! (GEN. 1:24-31)

BELIEVE IT!
