# **"Flood Geology of Wisconsin"**

University of Northwestern - St. Paul, 3003 North Snelling, Roseville, MN,  
Totino Fine Arts Center, Room F2128 (Old F116) [tccsa.tc](http://tccsa.tc)

What is the significance of the wonderful rock formations we see in Wisconsin and the Upper Peninsula of Michigan? When were they deposited? Many thousands or millions of years ago as the long age people believe? Or, recently by Noah's Flood? This talk shows how the Noah's Flood record helps us to understand the geology of our area. This talk will look at the geology of specific locations in Wisconsin in a chronological "tour" of the geologic processes that operated during the stages of the global Flood and during the subsequent ice age. We can see features associated with the breaking up of the fountains of the deep, flood sedimentation, formations formed by receding flood waters, and ice age features all in our own backyard. Perhaps you will get some ideas for your next creation vacation.
