Why does almost every report on the latest "human ancestor fossil" include the sentence: "This causes major rethinking of human ancestry"? No other area of science seems to need to much rewriting with each subsequent discovery. Just how scientific and objective are the conclusions that get reported in museums, textbooks, and popular magazines? Who is this elusive apeman?

The talk reveals how this subject is the perfect opening for talking to Christians and non-Christians alike about Biblical reality, why they can trust the Biblical view of history, and their need for a Savior. From the latest fossil finds to the historical blunders, this talk shows how the misinterpretation of Genesis has had a domino effect leading even Christians to accept outrageous "ape-fool-ary" which undermines the Christian faith.
