2009 represented the 200th Birthday of Charles Darwin and 150th anniversary of his book, *On the Origin of Species*. Universities, schools, and unfortunately, many churches are still having evolution and Darwin Celebration days. However, the nagging question is: Was Darwin Wrong? Has modern science really offered much to support Darwin's theory? Not just to be a party basher, Dave & Mary Jo Nutting give compelling reasons from biology and the fossil record why Evolution doesn't hold up.
