A familiar question is "How did Noah get all the species of animals in the Ark?" But, Noah did not put a pair of every species in the Ark but a pair of each "Kind" of animal. This talk will define a Kind, describe natural selection in terms of Kinds, provide examples of different Kinds and describe how animals are placed into Kinds by people known as baraminologists.

Sponsored by the TCCSA, Free and Open To The Public www.tccsa.tc
